Introduction

a. Purpose

Shakya Ridex is a modern online car rental platform offering well-maintained premium car rental experience across India by combining convenience, reliability, transparency and luxury. It provides a seamless digital experience for tourists, students, families, professionals, and businesses to browse, compare, and securely book vehicles 24/7 with various payment options.

b. Scope

Shakya Ridex is a web-based application designed mainly for two users: Customers and Administrators. The major scope of this project includes:

- Develop a premium luxurious digital car rental service across India.
- Show car brands, models, rental prices, and availability.
- Offer a convenient, transparent, and user-friendly car rental experience for all. Maintain a fleet of well-maintained and regularly serviced vehicles.
- Equip administrators with tools for streamlined management of vehicles, customers, bookings, payments,
- and maintenance.
- Monitor Fleet revenue and book via reports

c. Stack Description

The project uses the following technologies for development:

- Frontend: HTML, CSS, Java Script
- Backend: PHP
- Database: MySQL
- Other: VS Code, Developer Tools, GitHub

Overall Description

a. Requirement

Shakya Ridex is a web application that offers a unified, user-friendly platform for customers to browse, compare, and book affordable luxury car rentals. It also provides administrators with efficient tools to manage vehicle listings, bookings, pricing, customer information, offers, and website content.

b. Module Description

The Shakya Ridex WebApplication is divided into the following modules:

- Home Page
 - Featured vehicles, special offers, customer reviews, and company overview.
- About Us
 - Company history, mission, vision, and why choose ShakyaRidex.
- Cars
 - Vehicle categories, specifications, pricing, availability, and booking options.
- Booking
 - Vehicle selection, rental duration, pickup/drop-off details, and booking confirmation.
- Pricing & Offers
 - Rental plans, discounts, seasonal offers, and promotional packages.
- Locations
 - Pick-and drop-off locations, branch information, and service areas.
- Contact Us
 - Inquiry form, contact details, customer support, and FAQs.
- User Dashboard
 - Booking history, active rentals, profile management, and payment details.
- Admin Dashboard
 - Manage vehicles, bookings, customers, offers, payments, and website content.

c. Sub Module Description

Home

The home section of the website starts with an attractive and simple but well detailed banner of the company showcasing all the facilities and privileges the company gives. The website has quick links which help with instant navigation.

About Us

The about section contains of the company mission, establishment info along with the Range of vehicles offered and Service quality Promises. It also answers the main question of why Choose Us and not any other rental services in a detailed manner.

Models

The table is the Centre of attraction as its cheap price can make any user book a luxurious and premium car for affordable price. The gallery section shows the exact color and model of the car the customer gets after renting in the best possible condition.

Booking

The booking page lets the user go through a hassle-free checkout with minimal time for document verification and auto price selection of the required model with special offers as per the terms and conditions.

Contact

The contact section serves the purpose of providing customer communication details for any problems they face along with the address of the company and official mail id for feedback and company number for any enquiries.

Functional Requirements

a. Software Requirements

The website demands Windows 10/11, macOS, or Linux (server-optimized) as its OS. Frontend development uses HTML5, CSS3, and JavaScript, while the backend is supported by PHP 7.4+. MySQL keeps databases containing client, booking, and vehicle information. Compatibility with modern web browsers (Chrome, Firefox, Safari, and Edge) is important.

b. Hardware Requirements

This section describes the bare essential hardware requirements for successful development and deployment. For development, an 8 GB RAM, a dual-core CPU, and 20 GB storage is sufficient. To manage traffic and ensure best performance, the production server should have two vCPUs, 4-8 GB RAM, and 50 GB of storage. A reliable internet connection is critical for hosting and ensuring access for users.

c. User Requirements

The site offers simple navigation and a contact form for user enquiries. Administrators may handle customer enquiries, update content, change rates, and control car details. This system provides accurate data, efficient communication, and enhanced service through extensive tracking.

Table Description (Database System)

Module	Sub- Module	Description	User types
Home page		Overview of ShakyaRidex, featured cars, and offers	Visitor
About us		Information about the company, mission, vision, and services.	Visitor
